

# BENZ Solidfix® Quick Change System

The concept is simple.....really simple! You save time and you save money. We know that you have heard that before, but listen up. If you could change tools on your aggregate in less than 20 seconds, would you? Of course you would. If you didn't have to measure the new tool length, would that save time? Of course, again! With the Solidfix® System you have a common aggregate body that can have different outputs. Saw blade, Nut and Collet, Arbor, Weldon drill holder and Closing Plug, all are interchangeable. Now here's the cool part; the tools always register in the body perfectly so you can have all your tool parameters stored in your tool library. When you change out the aggregate, you assign it the appropriate tool number and you are ready to go.

So in less than a minute, you can change the aggregate configuration and don't even have to take it off the machine. Save time, save money with Solidfix® .
